PROFESSIONAL SUMMARY

Sr. Software Engineer with 5+ years of experience building scalable, high-performance web applications. Expertise in frontend architecture, performance optimization, and large-scale monolithic and micro-frontend applications, with hands-on experience developing backend services and REST APIs, and applying distributed systems and system design principles to build reliable, maintainable software.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python
- **Frontend:** React.js, Next.js, React Native, MUI, Testing Library, Shopify Hydrogen
- **Backend:** Node.js, Express.js, REST APIs
- **Datastores:** PostgreSQL, MongoDB, Redis
- **Cloud & DevOps:** Docker, AWS, Nginx, GitHub Actions
- **Architecture & Concepts:** System Design, Microservices, Performance Optimization, Core Web Vitals
- **Tools:** Git, GitHub, Postman

PROFESSIONAL EXPERIENCE

OZiva (HUL) — *Sr. Software Engineer* (Oct 2022 – Present)

- **Developed and maintained production React.js applications** using **JavaScript, TypeScript, Next.js, and Material UI (MUI)**, building reusable components and feature-based modules for scalable customer-facing experiences.
- **Contributed to the migration from a custom React.js storefront to Shopify Hydrogen (SSR)**, improving **Google PageSpeed from 20 to 75+**, reducing **bounce rate by 30–35%**, and increasing **conversion rate from ~2–3% to ~4–5%** through improved rendering strategies and frontend performance optimization.
- Implemented **frontend performance optimization** using **Server-Side Rendering, code splitting, lazy loading, and bundle optimization**, with a strong focus on **Core Web Vitals**, page-load performance, and user experience.
- Worked across **monolithic and micro-frontend architectures**, contributing to reusable frontend patterns, component organization, responsive UI development, and maintainable feature-based structures.
- Built and maintained features across **React.js, Next.js, Shopify Hydrogen, and React Native**, delivering responsive customer experiences across web and mobile applications and integrating RESTful APIs and third-party services.
- Developed **unit and component tests using React Testing Library**, covering critical UI behavior and user interactions to improve frontend reliability and reduce regressions during feature development.
- Worked hands-on with **Node.js and Express.js** to develop and integrate **RESTful APIs**, implementing authentication, business validations, API integrations, and asynchronous request handling to support frontend customer journeys.
- Gained hands-on backend experience with **Redis caching, Kafka-based asynchronous processing, JWT authentication, MongoDB, and PostgreSQL**, collaborating with backend teams to troubleshoot API issues and improve end-to-end application reliability.

- Integrated **GA4, Google Tag Manager, and Mixpanel** to track user journeys, engagement, and conversion behavior; collaborated with Product teams to analyze data and run **A/B tests** for customer-facing features and product improvements.
- Integrated **Razorpay** as part of a payment gateway migration from GoKwik, helping reduce payment processing costs while maintaining a reliable checkout experience.
- Participated in **code reviews, Agile ceremonies, frontend architecture discussions, and technical decision-making**, while mentoring **2 junior engineers and 4 interns** on development practices and code quality.
- Used **Google AI Studio** to accelerate UI implementation and repetitive development tasks, reducing feature development time by approximately **35–40%**, followed by code review, refactoring, testing, and production validation

Cere Labs — *Software Engineer* (Jun 2021 – Jun 2022)

- **Developed and maintained internal engineering tools** that streamlined developer workflows, automated routine tasks, and improved operational efficiency across multiple teams.
- **Implemented new features and resolved production issues** across internal applications, improving application stability, maintainability, and user experience while working closely with senior engineers.
- Improved backend processing workflows using **Redis caching**, **RabbitMQ asynchronous messaging**, and **Python (Pandas)** for data processing and transformation, supporting more efficient and reliable execution of business workflows.
- Collaborated with the Analytics team on a **sensitive-data redaction application**, contributing to improvements in data detection and processing accuracy for document-based workflows.
- Contributed to **REST API development and frontend-backend integration**, troubleshooting API issues and supporting end-to-end feature implementation across applications.
- Participated in **Docker-based application deployments**, gaining hands-on experience with containerized environments, application delivery, and production support.

EDUCATION

Bachelor of Engineering (B.E.) in Computer Engineering (2017 – 2021)
Vidyalankar Institute of Technology, Mumbai — University of Mumbai
